# National Standard of People's Republic of China

GB 29921 - 2013

# Food Safety National Standard Limit of Pathogens in Food Products

Issued on 26 December 2013

Implemented on 1 July 2014

Announced by National Health and Family Planning Commission of People's Republic of China

## Food Safety National Standard

### Limit of Pathogens in Food Products

#### 1. Scope

This standard specifies pathogen indexes, limit requirements and testing methods for food products.

This standard is applicable to pre-packed food products.

This standard is not applicable to canned food products.

### 2. Application principles

- 2.1. Whether or not there are provisions of pathogen limits, food products manufacturers, processers, and operators should, to the best of their ability, take control measures to reduce the level of pathogens in food products and possibility of risks.
- 2.2. Samples should be taken in accordance with provisions of GB4789.1 and should be tested with methods listed in table one.

#### 3. Index requirements

Limit of Pathogens in food products is listed in table 1.

Table 1 Limit of Pathogens in Food Products

| Food Category  | Pathogen Index                        | Sampling plan and limit (if not          |   |              |               | Test                        | Note                                       |
|--|---------------------------------------|--|---|--------------|---------------|-----------------------------|--|
|  |                                       | specified, is / 25 g or / 25 ml) n c m M |   |              |               | Method                      |  |
| Meat Products  | salmonella                            | 5  | 0 | 0            |               | GB 4789.4                   | _  |

| Nut Seed Products - Smashed nuts or seeds (paste) - Pickled nuts   | salmonella                  | 5 | 0 | 0                    | _                  | GB 4789.4                   |  |

Note 1: Food category is used to define applicable scope of pathogen limit; it applies to this standard only.

Note 2: n is the number of samples collected from the same batch of products; c is the maximum allowable number of samples exceeding m level; m is the acceptable limit level for pathogen index; M is the highest safety limit for pathogen index.
